

TECHNICAL COMPETENCIES

Languages & Core Architecture

PHP 8.2+

Java

SQL

OOP / SOLID

Design Patterns

Clean Architecture / DDD

Databases, Profiling & Caching

PostgreSQL

MySQL

Redis (Cache-aside)

Composite B-Tree Indexes EXPLAIN ANALYZE

Frameworks, Testing & Quality

Symfony

Laravel

Doctrine ORM

Eloquent

PHPStan Level 8

PHPUnit

Architecture, Messaging & DevOps

Microservices

RabbitMQ

RESTful APIs

OpenAPI / Swagger 3.0

Docker CI/CD / GitHub Actions

WORK EXPERIENCE

PHP Backend Developer • Efumo SSC - Digital Transformation (Part-time)

Jul 2026 – Aug 2026 • 2 mos

- Engineered resilient backend components and business automation scripts in **PHP** for enterprise digital transformation projects.
- Designed REST API endpoints and optimized service communication protocols for high reliability and structured data processing.

PHP Backend Development Digital Transformation REST API Git

Senior PHP Backend Developer / Full Stack Engineer • WellnessLiving (Full-time)

May 2022 – May 2026 • 4 yrs 1 mo

- Architected core subsystems and scalable microservices in **PHP** and **Java** for an enterprise SaaS platform serving thousands of businesses globally.
- Designed and implemented an event-driven marketing campaign automation engine powered by **RabbitMQ**, **Redis**, and asynchronous webhooks for multi-channel trigger workflows and churn prevention.
- Conducted deep architectural database audit and refactoring on an overloaded 77-column orders table (eliminating N+1 queries, introducing composite B-Tree indexes, normalizing schema), reducing report queries **26x (12s → 450ms)**.
- Eliminated the "1-cent rounding error" in billing by converting inaccurate float fields to `DECIMAL(12,2)` with zero data corruption.
- Enforced high availability (99.98%), established code review guidelines, and mentored engineering peers in DDD and database query profiling.

Microservices Java PHP 8 MySQL PostgreSQL Redis RabbitMQ Docker CI/CD

Web & Backend Developer / Full Stack Engineer • Absolutist

May 2020 – Apr 2022 • 2 yrs

- Engineered server-side logic and web infrastructure for gaming titles (**Gamedev and Back-end Operations**).
- Built high-throughput REST APIs for client game communications, player profile synchronization, and game state persistence.
- Optimized MySQL database queries and implemented Redis caching to handle sudden traffic peaks during updates and live events.

Gamedev Back-end Operations PHP MySQL Redis REST API

PHP Backend Developer / Magento Backend Developer • Babenko eCommerce GmbH

May 2019 – Apr 2020 • 1 yr

- Developed modular software extensions and customized enterprise e-commerce solutions using **Magento** and **PHP**.
- Integrated external payment gateways, shipping logistics providers, and ERP/CRM inventory management systems.
- Optimized checkout performance, cart state management, and product catalog indexing for European clients.

Software Development PHP Magento MySQL E-Commerce

KEY ENGINEERING PROJECTS

Automated Marketing Campaign Engine

Event-Driven • High Load

Engineered a distributed trigger automation engine processing platform-wide events. Decoupled via RabbitMQ queues and Redis Streams workers, eliminating HTTP timeouts and enabling automated retention chains, abandoned cart recovery, and omnichannel delivery.

PHP 8 RabbitMQ Redis Webhooks MySQL

Database Schema Normalization & Optimization

DB Optimization • 26x Speedup

Technical audit and deep refactoring of an overloaded 77-column orders table (God-Table antipattern). Eliminated ORM N+1 bottlenecks, added composite B-Tree indexes, resolved 1-cent rounding bug via DECIMAL(12,2), reducing report latency from 12s to 450ms.
